

Security Surveys & Crime Prevention

Reduce the Risk of Theft and Vandalism

Theft and vandalism at business premises or in the home can be reduced by effective security. Apart from the obvious benefit of minimising losses, this will also provide increased peace of mind to staff or residents and from the business perspective is likely to lead to happier work environment, increased efficiency, improved image with customers and sometimes lower insurance premiums.

Using a systemised approach, Surelock carry out a full survey of your home or business premises. The site perimeter, integrity of buildings and vulnerability of individual rooms are examined in detail together with existing physical/electronic measures and procedures already in place to reduce crime. The results are then presented in a clear, fully illustrated and easy to understand report. This summarises the findings of the survey, quantitatively assesses the overall vulnerability of the premises, highlights areas at risk and offers appropriate and cost-effective suggestions as to how these may be addressed in the form of a prioritised Action List.

For clients looking to purchase new business premises or a new home, we can offer the above security evaluation and additional visits to the premises "out of hours" to assess the area at night.

A Faster Approach to Quantifying Risk

Another form of security report that we can offer is a risk assessment that provides a quantitative measure of the overall risk of an asset. It does this by considering its vulnerability and the security measures already in place to protect it and then ranks these individually and collectively using a simple colour coded thermometer system. The security assessment is particularly valuable where a number of sites are to be considered because it allows resources to be directed in a more cost effective manner.

Our experience in investigating scenes of crimes means that our surveyors not only scrutinise every individual aspect of security but also keep the bigger picture in mind, looking for potential access and exit routes by intruders, accessibility of secure areas within public

buildings and vulnerabilities caused by inappropriate procedures, poor design or neglected maintenance.

Surelock have carried out hundreds of security surveys and assessments throughout the United

Kingdom and Ireland of private dwellings, large and small offices, contact centres, retail outlets, building sites, warehouses and yards, utility sites, including reservoirs and dams and large public buildings.
