

International Investigators and Security Consultants

Internet and Telecom Security

Data protection is of paramount importance to most companies and individuals. In fact legislation dictates that, if a company holds personal data, that they must ensure its security. In the 21st century, technology is a vast aid to the administration of business but it can also be an Achilles heel. The security of business information should not fall into the wrong hands. Companies have to ensure that their employees are trustworthy and do not sell the company out.

Investigations in IT and telecoms have increased dramatically for Surelock. Call centres

are regular targets for "Trojan Horse" employees. They steal clients' personal data and pass it on for the ultimate use of criminal gangs. They steal client data-bases, sales targets, records and strategies for the use of competitors.

We conduct discreet, covert investigations to test IT and telecom systems and the individuals operating them. Sometimes, we are able to remotely obtain evidence for use in prosecutions. We also conduct vigorous audits and test the integrity of employees and systems and make critical recommendations for improvements.
